

Locus Summary

	One	Two
Points	Description The locus of a point a constant distance from another point Construction A circle. <i>(The answer might be just part of a circle.)</i>	Description The locus of a point an equal distance from two other points. Construction A perpendicular bisector of the line joining the two points.
Lines	Description The locus of a point a constant distance from another line. Construction A parallel line <i>(A racetrack if the line is a fixed length.)</i>	Description The locus of a point an equal distance from two lines (not parallel). Construction An angle bisector.
